

NAME : RAGHAV MAHESHWARI

ROLL NO: 53

PANEL: A

BATCH: A4

### EVS ASSIGNMENT 1

**Q1. MITWPU Computer society of India has organised “Helping hands”. In your opinion, what is the objective that is fulfilled by this initiative? How can you relate it to the recent chapter that we studied?**

Ans :

Giving is not just about making a donation, it is about making a difference.

“Helping Hands” aims to hold collection and distribution drives for people to donate their unwanted household or personal items such as books, clothes, electronics, etc.

It believes that there are many people who want to help others have contribute to the society in a positive way but are unable to do so because of lack of time and other obligations. It enables people to actualize their kind intentions and help them give away unwanted things for a good cause.

In the recent chapter, we learned about natural resources, environment and how to preserve it. “Helping Hands” aims to conserve resources through the REUSE concept. It also helps the society by helping the needy.

Such initiatives should be promoted and more people need to be made aware of them.

**Q2. Have you found any difference in the natural areas like forests, beaches, national parks that you have visited post covid-19 era? Write your positive or negative experiences about the same (5 marks)**

Ans :

Covid 19 led to people staying at their homes. Reports from all over the world show that the environmental conditions including water bodies, air quality and wildlife improved a lot. The nature has started healing on its own without any kind of human intervention.

Contamination in the form of plastics, hydrocarbon spills, microbiological loads, noise levels have either directly or indirectly reduced. Beaches, rivers and other public visited water bodies are now less polluted.

Population staying indoors surged, leading to less usage of natural resources, vehicles, appliances at workplaces. Natural parks and forest went undisturbed, flourishing and growing on their own.

This showed that less human intervention causes environmental changes that bear positive results. Now that public restrictions have eased, we need to be mindful about the usage of resources around us. Covid era has taught us a lot about the environment and its importance.
